

**The
Wood Resources International Ltd.**

Sustainable Forest Management System

Wood Resources International Ltd., a U.S. based consultancy with over 13 years experience with the international forest product industry, is pleased to offer a new practice to “design, develop, and implement sustainable forest management systems” for clients worldwide. The company will integrate international experience and demonstrated expertise, with its knowledge of North American forest practices and forest management challenges in support of this effort.

The practice is designed to provide a systematic solution to the challenge of sustainable forest management and certification. It will help position the client within the rapidly changing marketplace for certified forest products, and foster an environmental consciousness within the client organization. The project team will work closely with clients to design, develop and implement a custom, high performance, SFMS through management tools and procedures such as system planning, software support, training, and overall implementation assistance.

In addition to preparing the client for a third party certification audit under ISO 14001, CSA, FSC or SFI, this program will also allow the client to capture the additional benefits of a customized SFMS, such as reduced environmental risk and compliance costs.

Components of a Successful SFMS Design and Implementation Program

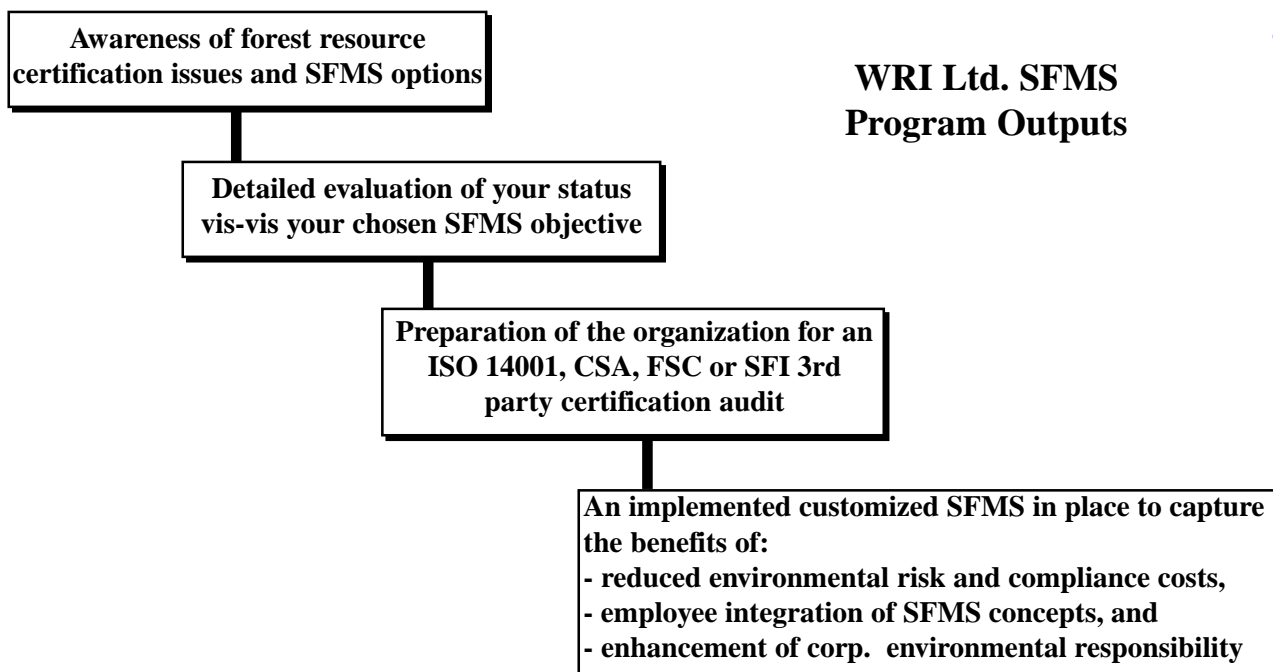

The program is built around several interrelated tasks, including an initial awareness training component, system review and gap analysis, the development of a detailed implementation plan, and a certification readiness audit. The completion of the entire program will result in an implemented SFMS, customized to the unique requirements of the client.

Practice Team

Wood Resources International has tracked the evolution of environmental issues related to forest management around the world through its ongoing consulting practice for many years. As the need to implement sound sustainable forest management systems has become a prerequisite to participation in the global forest product marketplace, WRI believes owners can benefit from the experience gained from this global perspective.

WRI Ltd. SFMS Program Outputs

The practice team will be led by Mr. Jon Dey, Director of Forme Consulting Group of Wellington, New Zealand. For the past 5 years, Mr. Dey has successfully implemented sustainable forest management systems within a number of companies including;

Rayonier NZ Ltd.
Fletcher Challenge Forest
Timberlands West Coast
Wenita Forest Products

Juken Nissho Ltd.
Forestry Corp. of New Zealand
Carter Holt Harvey
Ernslaw One Ltd.

Mr. Dey will be supported by domestic forest management experts who bring knowledge of the U.S. SFI Program and regional forest management issues to the project team. Project management, technical support and quality control will be provided by the staff of Wood Resources International Ltd. out of its Leesburg, Virginia offices.
